### 제네릭

```
using System;
₽namespace ConsoleApp3
    class MyStack<T>
        T[] _elements;
         int pos = 0;
            _elements = new T[100];
            Console.WriteLine("Stack Created!");
         public void Push(T element)
            _elements[++pos] = element;
            Console.WriteLine(_elements[pos]);
            return _elements[pos--];
    class Program
         static void Main(string[] args)
            Console.WriteLine("Hello World!");
            MyStack<int> numberStack = new MyStack<int>();
            MyStack<string> nameStack = new MyStack<string>();
            numberStack.Push(10);
            nameStack.Push("Kang");
            numberStack.Pop();
            nameStack.Pop();
```

#### C#댈리게이트

```
delegate void MyDelegate();
class Program
    static void Main()
       MyDelegate myDelegate = Method1;
       myDelegate += Method2;
       myDelegate += Method3;
       myDelegate();
       Console.WriteLine("프로그램이 종료되었습니다.");
    static void Method1()
       Console.WriteLine("함수 1실행");
    static void Method2()
       Console.WriteLine("함수 2실행");
    static void Method3()
       Console.WriteLine("함수 3실행");
```

#### C#이벤트

```
⊒class Button
    public event EventHandler Click;
    public void OnClick()
        Click?.Invoke(this, EventArgs.Empty);
⊟class Program
    static void Main()
        Button button = new Button();
        button.Click += Button_Click;
        button.OnClick();
    static void Button_Click(object sender, EventArgs e)
        Console.WriteLine("Button Clicked");
```

```
using System;
∃namespace ConsoleApp4
    public class KeyEvent
        public delegate void KeyEventHandler(int intInput);
        public void OnKeyDown(int intInput)
            if (Click != null)
               Click(intInput);
    class Program
       static void Main(string[] args)
            KeyEvent key = new KeyEvent();
            key.Click += K1;
            key.Click += K2;
            Console.Write("0~5 사이의 숫자를 입력해주세요: ");
            if (int.TryParse(Console.ReadLine(), out int intlnput) && intlnput >= 0 && intlnput <= 5)
               key.OnKeyDown(intInput);
                Console.WriteLine("What?");
        static void K1(int a) => Console.WriteLine($"You Pressed Valid Value : {a}");
        static void K2(int a) => Console.WriteLine("Well Done");
```

# 유니티 이벤트

```
using UnityEngine;
using UnityEngine.Events;
   public UnityEvent OnSpacePressed;
   public void Call_OnSpacePressed()
       Debug.Log("space pressed");
   void Start()
       OnSpacePressed.AddListener(Call_OnSpacePressed);
   void Update()
        if(Input.GetKeyDown(KeyCode.Space))
            if (OnSpacePressed != null)
                OnSpacePressed.Invoke();
```

#### **UI Toolkit Event**

```
■using System.Collections;
using UnityEngine;
using UnityEngine.UIElements;
     public UIDocument _doc;
     private Button _TestButton;
     private Slider _TestSlider;
     private Toggle _TestToggle;
     void Awake()
        _TestButton = _doc.rootVisualElement.Q<Button>("TestButton");
        _TestSlider = _doc.rootVisualElement.Q<Slider>("TestSlider");
         _TestToggle = _doc.rootVisualElement.Q<Toggle>("TestToggle");
        _TestButton.clicked += TestButtonClicked;
        _TestSlider.RegisterValueChangedCallback(x => { Debug.Log("Hello2"); });
        _TestToggle.RegisterValueChangedCallback(x => { Debug.Log("Hello3"); });
     private void TestButtonClicked()
        Debug.Log("Test Button Clicked");
```
